Apex Network Case Study

Deimos Helps Client Achieve Infrastructure Transformation

Deimos partnered with Apex Network to secure and optimise their cloud infrastructure, delivering a solution focused on security and scalability. Using Deimos' blueprint and Google Cloud best practices, the partnership ensured resilience, flexibility, and growth readiness.

THE CHALLENGE

Apex Network faced critical challenges in securing and scaling its cloud infrastructure. Their existing solutions on Render and DigitalOcean provided basic hosting and deployment capabilities, but lacked advanced security, resource efficiency, and proactive monitoring. Apex required a robust cloud platform to safeguard assets, enhance visibility, and support their growing operations.

THE SOLUTION

Deimos partnered with Apex Network to design and implement a secure, cloud-native infrastructure. Utilising Google Kubernetes Engine (GKE), Cloud SQL, and advanced Secret Management, Deimos introduced automated identity management, secure secret storage, and anomaly detection. This zero-touch approach required no code changes while delivering real-time insights and enterprise-grade security.

Solution Pillars
• Security

Products
Google Cloud

THE RESULT

With Deimos' solution, Apex Network now operates in a secure, automated cloud environment that enhances security, observability, and scalability. Improved access controls, secret management, and proactive monitoring allow Apex Network to focus on product development while confidently scaling their operations without infrastructure vulnerabilities.
